

Camouflage Painting Tips

- The best way to camouflage an object is to match it to the surroundings in which it will be located.
- Use colors in the same family that work well together.
- Start painting with the lightest color and move to the darkest color.
- Take your time. Since there is a lot of overlapping, small mistakes won't show.
- As with any spray paint, use several light coats instead of one heavy coat.
- Always read the directions before applying the spray paint.
- Stencils
 - Use the stencils available on krylon.com
 - Create your own stencils by hand
 - Look to nature – use local tree leaves and branches as your stencils.
